Announcing Capacity and Subscriber Speed Increases

Arizona City, AZ March 15, 2008: Today, AZCI.net, the premier provider of High Speed Internet Service in Pinal County, AZ, announces that it has increased the overall capacity of its network to 36 megabits per second, the average speed of its backhaul circuits to 20 megabits per second or more, and that it will shortly make available subscriber speeds of 1, 2, 4, 6, 8, and 10 megabits per second.

The new capacity was achieved by adding new technology circuits interconnecting Arizona City with the public Internet. Backhaul speed increases were achieved by introducing new technology microwave radios and new firmware. Subscriber speed increases were achieved by introducing an overbuild of our network with new radio frequencies in the UN-II band from 5.3GHz – 5.8GHz.

Over the next few months, AZCI.net will be upgrading current subscribers to our faster bandwidth and offering additional service plans at the 8 and 10 megabit service level.
